Keeping Surgical Teams Aware and Informed

Lower the Risk of a "Never" Event. Safe Situational Awareness for Everyone® Display (S.S.A.F.E.)

The S.S.A.F.E. Display brings real-time patient information inside your OR and displays it in clear view for surgical teams, reducing information delays and manual checklists which may lessen the potential for a "never" event.

Optimize Patient Safety by Making Timely, Informed Decisions

The display automatically aggregates surgical case and patient information from your other data systems and displays it on an easy-to-read, dedicated screen in your OR. There's no need for additional data entry, phone calls or wasted time spent searching for patient data or test results. Your surgical teams are aware and informed, helping them optimize surgical case accuracy and workflow so they can focus on patient care.

Validate Patient Info at a Glance

The S.S.A.F.E. Display organizes information into simple tabs, including:

- Patient safety checklists
- Information on blood products, patient allergies and lab results
- Specimen inventory and disposition
- Staff information

Plus the display maintains visibility of time-sensitive information, such as antibiotic and tourniquet administration, and patient repositioning.

A Smart Solution Delivering Tangible Results

- Improve patient safety protocols
- Avoid costs associated with adverse events
- Reduces communication bottlenecks
