Resert™ HLD
High Level Disinfectant - Chemosterilant

Finally, a safe alternative to commonly-used high level disinfection solutions.

» Safe for your staff

» Safe for your patients

» Safe and efficient for your processing of critical and semi-critical medical devices

Resert HLD High Level Disinfectant - Chemosterilant is an oxidative chemistry that offers a safe alternative to the hazards associated with aldehydes. Resert HLD is a broad based microbicide made from Accelerated Hydrogen Peroxide (AHP)\(^1\), a proprietary formulation that combines a low concentration of hydrogen peroxide and other inert ingredients, which provide accelerated efficacy. Resert HLD is designed for the high level disinfection of heat sensitive semi-critical medical devices including manual and automated processing of flexible endoscopes.
Safe for Staff

» Eliminates staff exposure hazards associated with dialdehyde based HLD solutions by utilizing a oxidative chemistry
» Requires no special venting, measuring, mixing, and is safe for disposal. No activation required
» Virtually odorless

Safe for your Patients

» Leaves no toxic residues on devices
» Guards against biofilm formation by preventing proteins and soil from affixing to instrument surfaces
» Non staining

Safe and Efficient for your Department

» Safely accelerates throughput by processing devices in five minutes at 20°C
» Rapid and effective microbiocidal activity at 20°C
  • Sporicidal • Tuberculocidal • Fungicidal
  • Bactericidal • Virucidal
» Chemical indicator test strip verifies correct hydrogen peroxide concentration of the HLD solution
» Resort HLD can be reused for up to 14 days

Safe for your Instruments

» Resort HLD solution has been tested and found to be compatible with common materials used to manufacture medical devices, including flexible endoscopes and automated endoscope reprocessors\(^2\) (AER)

Safe for the Environment

» Resort HLD contains biodegradable, environmentally friendly, and inert components
» Resort HLD is water soluble and requires no special treatment (neutralization) prior to disposal
