Your CSSD: A HOLISTIC APPROACH

By immersing ourselves in your operations, we step back to look at the whole picture

Rather than just a snapshot of issues that need to be addressed, our interconnected products, solutions and exceptional service can refine your workflow process, increase productivity, remove inefficiencies and provide a safe environment for your patients and staff.

That's your ultimate goal, right?

IMS Instrument Repair
On- and off-site

IMS
Integrated Medical Systems
International, Inc.

STERIS is your **ONE** complete solution for a **BETTER PROCESS**.

At STERIS, we understand the enormous struggles you face daily as pressure mounts to mitigate threats while still trying to increase productivity. Inadequate staffing. Insufficient training. Limited resources. Poorly designed spaces. Outdated technology creating breakdowns between you and your OR.

Your success cannot be achieved through individual products or niche services. And you cannot afford to settle on cookie-cutter solutions. You're exposed to risk when there are breaks in the process. Every decision you make greatly impacts your workflow. That's why STERIS examines your entire process from the ground up, to attain consistent and sustainable results.

STERIS is built upon providing you with CONNECTIONS from ONE partner that takes a HOLISTIC approach to healthcare. STERIS connects the:

- RIGHT CHEMISTRIES WITH THE RIGHT EQUIPMENT
- ADVANCED TECHNOLOGY WITH EXCEPTIONAL SERVICE
- THOUGHTFUL PLANNING WITH PRACTICAL INTELLIGENCE

 STERIS

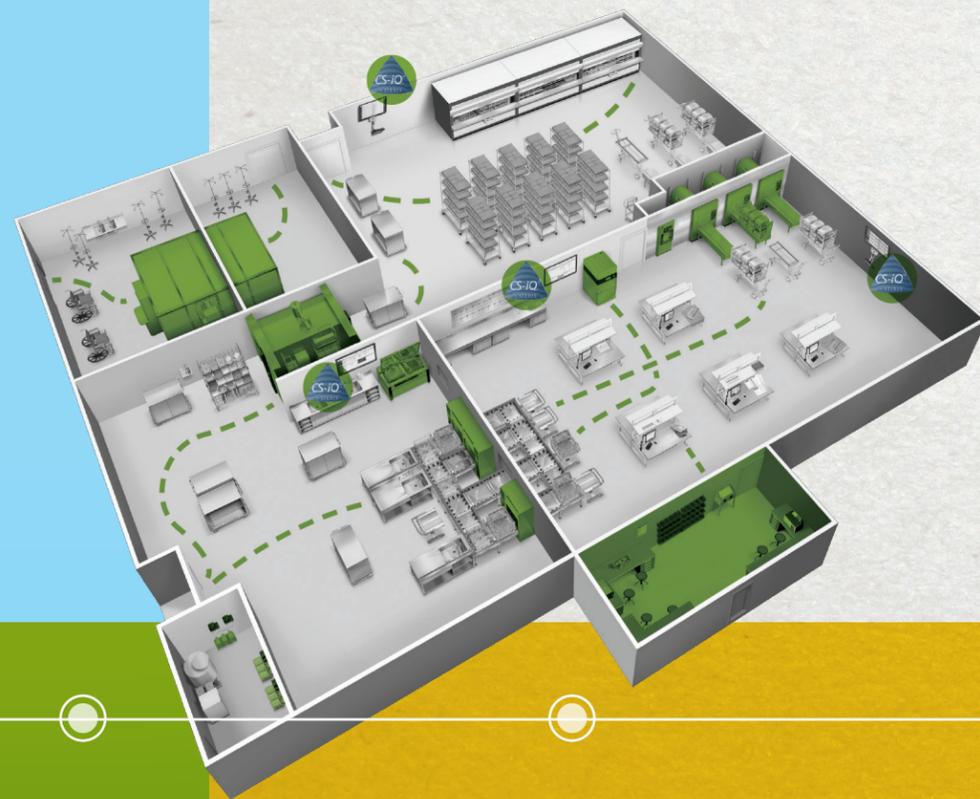

Improving real-life operational challenges

THROUGH DESIGN AND PLANNING

Anyone can sell you a washer (or sterilizer). Even the most innovative STERIS equipment and product solutions only get you halfway to the finish line.

SUCCESS BEGINS WITH SPACE AND WORKFLOW.

Only STERIS analyzes your layout and traffic patterns first to determine how to increase productivity and save time. With a growing patient population and rapidly changing healthcare environment, you cannot afford delays, bottlenecks or inefficiencies.

Our meticulous approach from the beginning lays the groundwork to **CONNECT** your products, equipment and services that help you be successful.

Since space is inextricably linked to your workflow, planning is a vital part of your design and long-term success.

STERIS looks beyond equipment and drawings to assess the impact of space and staffing on equipment utilization and movement through your department. Capacity planning with a STERIS Processing Solutions Manager (PSM) ensures your department's success, while establishing a framework for current and future decisions. Our PSMs review your average and peak day capacity, prep sinks and assembly stations, as well as your current equipment to assure instrumentation can flow through your department without unnecessary backlogs.

STERIS further delves into your process with on-site capacity planning assessments. You'll see hour-by-hour assessments of capacity, throughput and staffing so you can better understand your real-life operational issues.

Staffing analysis based on capacity and throughput by hour helps you understand where and when you need staff most.

In partnership with contractors and your facility professionals, our Processing Solutions Managers offer highly functional, intuitive design solutions for new construction and department expansion. We consider every detail to optimize your department to best serve your ORs and case load. From start to finish, only STERIS takes the time to understand your workflow and needs to design a space that will maximize your performance.

MOBILE SOLUTIONS: Because downtime is never an option, STERIS has the solution. If your CSSD is down due to construction or unforeseen situations, we can bring a complete mobile CSSD to your hospital so normal scheduling and surgeries can proceed.

Behind our products & equipment:

THOUGHTFUL ANALYSIS

to ensure compliance and cost-savings.

*Once your foundation is in place,
the best designed and planned
departments need the right products
to maximize performance.*

STERIS delivers efficiency and compliance with the broadest portfolio of innovative consumables and capital equipment. Behind these solutions is a comprehensive approach to ensure our products continually optimize your process.

Keeping you compliant is also integral to our holistic approach. Our Device Testing Program partners with the world's leading medical device manufacturers, to ensure STERIS products are continually validated and included on device IFUs—giving you peace of mind while allowing you to focus on your day.

As part of the STERIS consultative and holistic approach, our experts will analyze your water and detergent dilution rates, current water treatment solutions and provide recommendations.

Unique to our industry, our chemistries are formulated in our own plants, not purchased from another vendor. These formulated chemistries work with a vast array of water qualities and are optimized with validated cycles within your STERIS washers. Developed exclusively in-house by STERIS chemists and microbiologists—productivity, efficiency and cost savings are at the heart of this formulation.

From ergonomic sinks to fast water-conscious washers to safe, compliant high and low temperature sterilization, our extensive, unmatched portfolio of solutions leaves you with no gaps. Designed to all work in concert with connectivity, you can be confident you are compliant and driving efficiency.

**Diagnostic
Solutions**

SERVICE

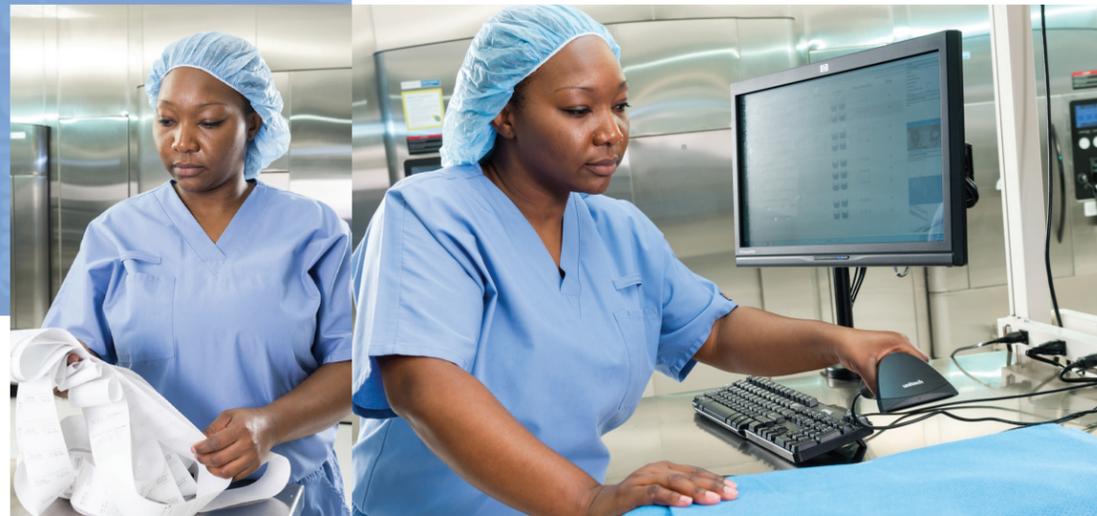

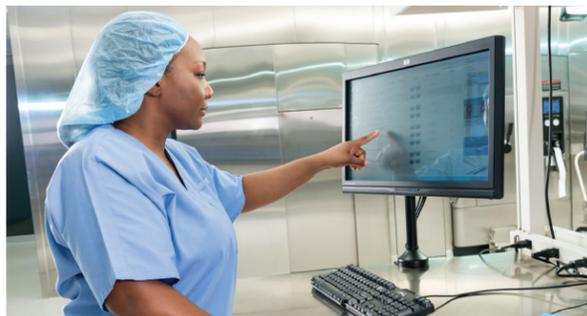

By analyzing water samples, scale and chamber corrosion, STERIS is able to provide recommendations to deliver the assurance you need to protect your process and your bottom line.

WORKFLOW & DATA MANAGEMENT EXPERTISE

Real Time Management Software Drives Accountability and Compliance

STERIS services and product solutions are CONNECTED into one seamless platform to provide you with the most powerful tool of all—INFORMATION. Any disruption in your process can endanger the entire workflow. But with the right information and metrics at your fingertips, you can be assured you are working on the right thing at the right time in the right way. If there's a breakdown anywhere, you will know immediately. STERIS's proprietary workflow management software, CS-iQ®, enhances productivity, traceability and compliance, while mitigating risk, across your entire department and beyond.

Speed, uptime and efficiency are just the beginning benefits. Our intuitive software can take you from reactive management to proactive planning to achieve higher levels of performance. Yes, we can certainly track instruments—but even better—you can leverage CS-iQ to effortlessly optimize your workflow and process, eliminating your bottlenecks and saving you money.

This is one of the most important technology applications you'll ever put in place for workflow management.

And it was developed by the ONE Provider that understands your department and how to intelligently CONNECT all of your products, equipment and services to vastly improve your entire process.

Has a trauma event suddenly brought an overflow of patients through the ER? CS-iQ can help you quickly determine which OR is available for immediate surgery. Your team will also be notified in real-time to release the appropriate surgical tools.

Visual dashboards also allow proactive management of your equipment with reminders for preventive maintenance and daily service tasks. Monitor your equipment's detailed cycle statistics including load number, total cycle time and leak test results.

Learning from the Leader

IN REPROCESSING

Once you have everything CONNECTED and in place, we're still not finished. Our commitment to service and education are second to none. This is yet another aspect of our business that provides value beyond product. Through ongoing education and in-depth training opportunities, we help your staff support the delivery of optimal patient care.

Want to learn how to reduce infection from the most common multi drug resistant organisms? Maintain better instrument quality and washer performance? Establish a staff certification program? Then you'll find your answers through in-depth courses taught by authorities in infection control at STERIS University.

Our ongoing continuing education focuses on infection prevention, device reprocessing and periOperative support. Esteemed faculty follow strict criteria and apply a quality management system for maintaining relevant, high-quality content. Our goal is to help your department succeed; therefore your success is important to us.

STERIS also offers customized technical training programs to your Biomed staff—online, on-site or

at our training center—that teach you and your team proper care, use and preventive maintenance for a wide variety of STERIS products. The goal of our programs is to help you protect your investment and maximize the uptime of your equipment.

STERIS

UNIVERSITY

Reducing risk with

A LINE OF ONE

The stakes have never been higher—Our commitment to infection prevention and control is unmatched in the industry. You can try to achieve exceptional operating performance using multiple vendors, or you can invest with ONE PARTNER to address and anticipate critical challenges and improve your overall process.

We're with you from the beginning. As your ONE PARTNER, we analyze your process, custom-design and plan your space, connect you with the right tools and products, provide you with cutting-edge, robust software to manage everything, and offer you and your team ongoing support and training.

Who would you rather be aligned with in the one department that touches so many others within your healthcare facility? A pieces parts supplier? Or the leading sterilization company in the world whose practices of today become the standards of our industry tomorrow?

Only STERIS CONNECTS all of these pieces into ONE comprehensive solution for ONE line of protection.

ONE Partner
ONE unbroken Line of Protection.
That is the Power of **A Line of One.**

An Integrated Approach to an Ever-Present Threat

RELY ON STERIS TO OFFER:

BROAD PORTFOLIO OF INTEGRATED SOLUTIONS

STERIS offers an unrivaled range of products and solutions including SPD services such as instrument repair, water analysis and workflow management systems.

MOST COMPREHENSIVE SUPPORT IN THE INDUSTRY

STERIS backs up its commitment to healthcare with the industry's largest sales and service force as well as more resources post-installation.

SPD & OR WORKFLOW EXPERTISE

STERIS focuses on helping achieve operational efficiency in the SPD and OR, mitigating risk and minimizing operating costs.

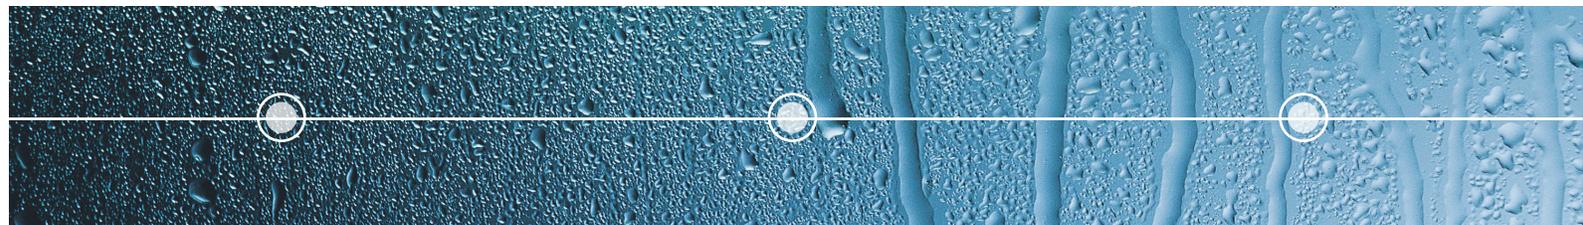

EDUCATION AND TRAINING

STERIS University provides continuing education and training with online and in-person modules, seminars and courses, often for free education credits.

PROVEN PERFORMANCE AND INNOVATION

Our "legacy of firsts" includes the first steam sterilizer and first instrument tracking system accessible from the OR.

Contact your STERIS representative and discover the advantage of being part of A Line of One.
