The VERIFY All Clean Test Washer Indicator - a consistent, reproducible method to routinely check the performance of your automated washing process.

Surgical instrumentation cannot be properly sterilized without being thoroughly cleaned. Until now, the only way to routinely verify the performance of your automated washer was visually inspecting the instrumentation after a completed cycle. Professional standards organizations have recognized the importance of monitoring your mechanical and chemical cleaning process. You now have an effective way of monitoring your automated washer and instrument cleaning chemistry functionality.
Performance by design

You rely on your automated washer’s ability to mechanically flow water and detergent into and onto difficult to clean surgical instrumentation surfaces. The VERIFY All Clean Test Washer Holder and Indicator have been carefully designed to mimic these difficult to clean surfaces. The mesh design of the holder represents a typical challenge that relies on the same mechanical and chemical activity. The VERIFY All

Features and benefits

- **No blood products** - Safe-to-handle, safe-to-place in your washer/disinfector, no toxic residuals on instruments
- **Consistent formulation** - Reproducible testing, time after time
- **Bright red test soil formula** - Easy-to-see, easy-to-interpret
- **Stainless steel holder** - corrosion and abrasion resistant
- **Mesh design holder** - Mimics typical surfaces to present a realistic challenge
- **Lot number on end of strip** - provides traceability

Clean Test Washer Indicator contains two sources of protein, lipids and polysaccharides to mimic common challenging test soils. Once placed into a wire basket, it will provide reproducible testing with ease and certainty. In the event you have a failure, the failure pattern on the washer indicator can assist in diagnosing the root cause of the washer’s failure.
