PROTECT YOUR PATIENTS

There is nothing more important than the safety of your patients.

In the GI suite, where concern is increasing about resistant organisms and tenacious bacterial spores such as *Clostridium difficile*, protecting your patients from the risk of infection is imperative.
Liquid chemical sterilization of your flexible endoscopes increases your margin of safety by helping to eliminate the risk. The alternative to aldehydes and high level disinfection, **SYSTEM 1E® Liquid Chemical Sterilant Processing System** provides this high standard of patient care, giving you and your patients well deserved peace of mind.

The SYSTEM 1E Processor is from STERIS Corporation, a world leader in infection control and sterilization technology. This liquid chemical sterilant processing system enables you to eliminate all viable microorganisms from the endoscope, including hardy bacterial spores such as *C. diff*, in its standardized, validated cycle.
